8916/8936/9x30系统解决方案Solution

- 为了直观，便于检索，我们在Salesforce系统上编写了系统解决方案。包含各个技术领域，便于大家查找。
- 8916系统解决方案
- Solution Number: 00029134
- 链接：<https://qualcomm-cdmatech-support.my.salesforce.com/5013000000VfUZ?srPos=0&srKp=501>
- 8939系统解决方案

MBN介绍

- MBN的设计需求，文档，实现方法, 请参阅Solution number:00029357.
- <https://qualcomm-cdmatech-support.my.salesforce.com/50130000000VgDA?srPos=0&srKp=501>
- 因为客户量产的版本可能不是高通最新的版本，但是MBN却随着软件版本不断的更新，所以推荐将高通最新软件版本的MBN，合入客户的版本中。
- Solution 00030261
- MBN build command for Windows when Excel not work.

Disabling Segment Loading on 8994

- We do support disabling segment loading by setting the NV 72542 to 1,0 on 8994.
- CR803719 is created to track this change.
- We are in the process of changing the default to disabling segment loading on 8994.

PDN level鉴权方式设置

- **问题描述：**
- eHRPD网络下，在UI上设置VPDN的专网APN后，尝试专网连接失败
- **Log片段：**
- // 从QMI log packet看，Android创建的专网APN([police@police.zj](#))没有成功创建

PDN level鉴权方式设置

原因分析：

- PDN level的鉴权协议只能是PAP only或者CHAP only,不能是PAP_CHAP
- MSG [05000/01] Data
Services/Medium 04:41:04.730 ds_profile_3gpp2.c 03347 dsi_profile_3gpp2_set
_param: param 173
- MSG [05000/03] Data
Services/Error 04:41:04.730 ds_profile_3gpp2.c 01593 **dsi_profile_3gpp2_set**
_pdn_level_auth_protocol: Invalid param value 3
- MSG [05000/03] Data
Services/Error 04:41:04.730 ds_profile.c 00546 _set_param: FAIL internal
set function
- MSG [05000/03] Data
Services/Error 04:41:04.730 ds_qmi_wds_profile.c 00868 Set Profile returns
error. Profile_identifier 173, Error 7

解决方法：

- UI上将PDN level鉴权协议类型从CHAP_PAP改为PAP或者CHAP（根据专网的鉴权方式设置）
- UI上不改，Modem需要**CR#746325**，通过**NV#73602**
（/nv/item_files/modem/data/dsmgr/config_pdn_level_auth）去设置PDN level鉴权协议，
- NV#73602的可选值为CHAP或者PAP，默认值为CHAP

FR22007 Location Aware System Selection - MCC Based Application Notes

- ❑ Please refer to 80-NU917-1. With this feature, UE will acquire service quickly if UE roam from home and power up first time.
- ❑ CR799240 is for open market to optimize power up time on open market devices with CMCC SIM card. This CR is applicable from MPSS.BO.2.0.1.c3 onwards.

MBN comparison tool

- ❑ How to know the MBN difference between 2 build?
- ❑ The MBNs are generated from the spreadsheet in the builds. One can easily use the MS Excel 2013 compare functionality to find the differences of the MBN *.xls file.
- ❑ <https://technet.microsoft.com/en-us/library/dn205148.aspx>
<http://www.k2e.com/tech-update/tips/722-tips-comparing-two-workbooks-excel2013-compare-files-feature>
- ❑ Alternative option – you can compare the xml files that are generated as an intermediate step with your favorite merge/compare tool.

Feature FEATURE_3G_USER_NW_REDIR_TO_LTE

- This is addressed in solution [00029839](#).
- This feature handles the network issue where the network issue scenario as below where UE goes for ping pong give no service to user.
- When a 3G only USIM is used in a 4G device, the UE is allowed by the 3GPP specs to try to get service on 4G NW. 4G Core Network will anyway, after having got info that this subscriber is not allowed in 4G, reject the UE request with cause #15, no suitable cells in tracking area.

CR 787939 to deprecate EPC profile support on APSS

- On MSM8994, MSM8909 and MDM9x35 MPSS releases, as a part data profile refactoring, Qualcomm introduced new profile tech type called EPC.
- Please refer application note **80-NV271-1_A** for details.
- **We currently have CR 787939 to deprecate EPC profile support on APSS. Doc 80-NM328-87 currently explains the purpose of this in more detail.**
