APN Setting for Lab Conformance Test

Background

- Most lab test expects using the TE configured APN. So UE should not configure any other APNs for attach under such scenario.
- In UE side, there are APNs configured on UI, and profiles in EFS. If the APN selected by UE is not null, or inconsistent with the one TE expected, detach will be triggered by UE.

Solution:

- Delete all the APNs on UI (setting->more->cellular network->access point name) after test SIM card is inserted;
- Delete the pre-defined profile in EFS system, then reboot

```
EFS: /pdp_profiles/profile1(profile2,...)
EFS: /data/ds_dsd_attach_profile.txt
```

- Check the APN setting by using AT+CGDCONT? or through QMICM to see the above operation takes effect.
- If such operation does not take effect, which usually owing to AP designated the APN according to AP side rules, then we need to delete the APN configuration in AP side. If OEM follow the default implementation, it can be

APN Setting for Lab Conformance Test

achieved by deleting the apns-conf.xml and clearing the database:

```
adb root
adb remount
adb shell rm /etc/apns-conf.xml
adb shell rm /data/data/com.android.providers.telephony/databases/telephony.db*
adb shell rm /data/data/com.android.providers.telephony/shared_prefs/preferred-apn.xml
```

And OEM can also modify the apns-conf.xml to avoid the APN mismatch issue.
 For example, in UIM some test cases, the SIM card MCC/MNC info is set to 246/081 during the test, we can add below rule in apns-conf.xml:

```
<apn carrier="TEST"
apn=""
mcc="246"
mnc="081"
user=""
server=""
password=""
proxy=""
port=""
mmsproxy=""
mmsport=""
type="ia"/>
```

Detach Issue Caused by Dual Mode Test SIM card During Lab Test

- Issue Description
 - During LTE RF/RRM and protocol test, unexpected detach owing to dual mode test SIM card is often observed, which causes test case failure.

GCF/PTCRB VoLTE Lab Test MBN Introduction

- VoLTE MBN is available in recent software release such as BO.2.6, JO.1.0, TH.1.0, etc.
- For VoLTE lab conformance test, we recommend to use carrier specific VoLTE lab conformance MBN if there is corresponding MBN available.
 - For example, for CMCC products, there are VoLTE lab test MBN and commercial MBN available, we recommend use below MBN for different test:

SW MBN	MBN Location	Test Area
CMCC Lab_Conf_Volte	\modem_proc\mcfg\configs\mcfg_sw\generic\China\ CMCC \CSFB\DSDS\Lab_Conf_Volte\mcfg_sw.mbn for DPM/JO PLs;\modem_proc\mcfg\configs\mcfg_sw\generic\China\ CMCC\Lab\Conf_VoLTE\ mcfg_sw.mbn for Bolt2.6/ TA1.0/TH1.0 and later	For CMCC VoLTE lab conformance test in 34.229-1, 36.523-1
CMCC Lab_Nsiot_Volte	\modem_proc\mcfg\configs\mcfg_sw\generic\China\ CMCC\CSFB\DSDS\Lab_Nsiot_Volte\mcfg_sw.mbn for DPM/JO PLs;\modem_proc\mcfg\configs\mcfg_sw\generic\China\ CMCC\Lab\NSIOT_VoLTE\ mcfg_sw.mbn for Bolt2.6/ TA1.0/TH1.0 and later	For CMCC VoLTE NS- IoT related cases
CMCC Commercial_Volte	\modem_proc\mcfg\configs\mcfg_sw\generic\China\ CMCC\CSFB\DSDS\Commercial_Volte\ mcfg_sw.mbn for DPM/JO PLs;\modem_proc\mcfg\configs\mcfg_sw\generic\China\ CMCC\Commercial\Volte_Subsidized\ mcfg_sw.mbn for Bolt2.6/TA1.0/TH1.0 and later	For CMCC VoLTE field/NV-loT/MOS test

GCF/PTCRB VoLTE Lab Test MBN Introduction

 If the target carrier has no VoLTE lab conformance MBN available, or there is no target carrier, OEM can test GCF/PTCRB VoLTE cases based on below RoW MBN:

SW MBN	MBN Location	comments
RoW	\modem_proc\mcfg\configs\mcfg_sw\generic\co	based on 3GPP spec, can be used for
	mmon \ROW\Gen_3GPP\ mcfg_sw.mbn	IMS case in 34.229, 36.523-1

 As the above RoW MBN is not specific to lab conformance test, below NVs need to be changed after activating the MBN:
